

DVS Backup Small Business is a fully featured secure online backup service that allows you to safely guard the files and data stored on your Small Business Server.

DVS Backup has been designed using the most up-to-date technology and by making use of animations, attractive layouts and complex logistics, we provide our users with a great experience from initial setup to routine tasks.

With DVS Backup you can manually backup your files any time or setup a schedule for automatic backups. You can also go beyond the customary backup task by taking advantage of unique features like Magic Folders and Time Vault.

Your saved data can only be accessed from your computer. This prevents unauthorised access to your files even if they have your user name and password. If you change or upgrade your computer, you will need to go through our automated 5 step online security check, to enable your data to be accessed by your new or modified computer.

DVS's inbuilt Data Integrity checking system protects your data at all times, monitoring all your backed up files for corruption and dealing with the problem automatically on detection.

### Top Features

- Secure Encrypted Connection
- Scheduled Backups
- Backup Now Option
- Co Workers Magic Folder
- Time Vault
- Restore of selected files
- Full Restore with Point in Time
- Multi User environment
- Run as Windows Service
- Resume on connection fail
- Microsoft Exchange Support
- Microsoft SQL Support
- Crypto Drive Option

SBS Server  
2008 Ready

## DVS Protecting your Data at All Times.

### Secure Encrypted Connection

To ensure the privacy of your data, all communications between our client application and the DVS servers are encrypted. All files are duplicated to different locations so even in the event of a disaster that affects one of the locations; your data is still safe.

### Scheduled Backups

DVS Backup has a comprehensive and easy to use scheduler allowing you to choose when you would like your backups to begin.

### Backup Now Option

This option will allow you to perform an immediate backup by starting a backup straight away.

### Magic Co Workers Folder

With the Magic Co Workers Folder you will have a folder on your local computer that is synchronised with the DVS servers and you can access the folder and files from the Internet. So, if you have home workers or co workers, you can share information with them.

### E-mail notification

DVS Backup will send you an email notification of the results of your backups.

### Restore of selected files

DVS Backup allows the user to restore a single file, multiple files or a complete restore of all data. The user can select a particular file or files and restore them to their original locations or a location of the user's choice. If DVS Backup detects a file with the same name in that location, DVS Backup will prompt the user with a confirmation box giving the user a choice.

- Restore and overwrite ( this will restore and overwrite the executing file )
- Don't Restore ( file will be skipped and not restored )
- Restore and rename ( the file will be restored and renamed 'filename.dvs.jpg'

### Full Restore with Point in Time

DVS Backup offers two full restore options 'Most Recent' and 'Point in Time'. Older versions of your files are kept for up to 90 days. The versioning feature can be set for either 30, 60, or 90 days, so you can restore previous versions of your documents and even restore files that were accidentally deleted. You can select individual files and versions to restore or a complete set of files. With the complete restore you can choose to restore the most recent versions, or restore versions based on a previous date.

### DVS Open File Option

With the built in 'Open File Option' there is no need to make sure all of the files you have been working on are closed. DVS Backup will backup all files even if you are in the process of working on them, or they are left open by another user, protecting you at all times.

### File Versioning

DVS File Versioning allows you to have 30 /60 / 90 days of backups of the same file, so in the event of a loss or corrupted file you can restore the file from a previous version. The settings can be changed in your control panel, the default is set to 30 versions.

### Multi User Environment

Designed for Microsoft Terminal Services this function will allow you to give DVS Backup to all your Terminal Services users with their own configuration settings, Magic Co Workers folder and Time Vault. (If Exchange or SQL are enabled on your account, then this option is not available.)

### Drag & Drop Interface

You can also use our 'Drag & Drop Tool' to easily restore files. This tool opens as a little gadget on your desktop and you can simply drag files to it and you will be presented with options to restore. You can also use the drag and drop tool to add additional files to your backup catalogue.

## Small Business Server 2008 Compatible

### DVS Crypto drive

If you have a large amount of data you may wish to use the DVS Backup to Disk Service. DVS will send a special external disk via DHL, door to door, to be plugged into your server. DVS support staff will enable this option and your server will make its first backup to the DVS Crypto drive, which is returned to DVS via DHL and layered on to our Data storage servers, enabling your server to backup only changes since the disk backup and reducing the backup time.

### Pre Backup Scripts

Pre backup scripts allows you to run a predefined script before the backup starts allowing you to shut down Data Bases, etc.

### Post Backup Scripts

Post backup scripts allows you to run a predefined script after a backup job has completed, allowing you to start services to data bases, etc.

### Data Control

With the modern age of computing and storage more and more companies are prone to Data theft. With DVS Backup you can assign an Administrator to manage your backup users accounts, therefore restricting the use of the DVS Backup Application on other computer systems and preventing users from downloading company data to another system. This built in protection also prevents the user from deleting backup data on the Backup Servers.

### Resume on connection fail

If your Internet connection should fail, DVS Backup will resume the backup from the point of failure when it reconnects. This was designed specifically with laptop users in mind, who never have enough time to backup, but this feature is included in all DVS Backup versions. Once the scheduled backup has started DVS Backup will attempt to back up your data whenever the Internet connection is restored.

### New\* Microsoft Exchange

With the DVS Advanced Exchange module you can protect your Exchange Server Data Base, with the option for multiple scheduling for full and incremental backups. Compatible with Small Business Servers 2003, 2008, 32bit & 64bit.

### New\* Data Integrity Check

Each file is checked before upload and the unique MD5 signature is recorded and stored in a Data Base at DVS. Once the file has been uploaded, DVS checks the unique MD5 signature is still the same. If the unique MD5 signature has altered, then the server will request the file to be re-uploaded. Once uploaded and transferred to the storage servers DVS periodically runs a MD5 signature check on all files stored on its servers. If the system finds some corruption on one of your files the system will request the Backup application to re-upload this file.

### New\* Microsoft SQL Module

With the DVS Advanced SQL module you can protect your Microsoft Sequel Server Data Bases, with the option for multiple scheduling for full and incremental backups. Compatible with all versions of Microsoft Sequel Server, 32bit & 64bit.

### New\* Disaster Recovery Option

In the event of a Disaster Recovery situation, DVS will copy your Data to a Crypto Drive and send a DVS engineer direct to your office to restore your data, saving you valuable time.

### New\* Remote Install

DVS offers a remote install of DVS Backup for a small fee. This gives you peace of mind that the install and configuration is correct.

### Time Vault

With Time Vault you can select any folder under your 'My Documents' folder to be monitored in real time for changes that are continuously backed up over the Internet. Use the Time Vault feature to protect your time sensitive data, so if you need a restore you will always have the most recent data available. Data in the Time Vault is not viewable on the website and is held in our secure storage area.

### Runs as a Windows Service

Upon install the DVS Backup Installer will install DVS Backup as a service in your computers' services, enabling backup to run, even if you are not logged on to your system.

### Auto Update

When DVS Soft release a new version your system will automatically know and inform you to download and install the latest version of the software.

### Supported Microsoft Operating Systems

- Windows Small Business Server 2003 Standard
- Windows Small Business Server 2003 Premium
- Windows Small Business Server 2008 Standard
- Windows Small Business Server 2008 Premium

### Minimum System Requirements

500 MHz minimum CPU required  
1GB system memory (Ram)  
Broad Band Internet Connection  
Microsoft service Pack 2  
Microsoft .NET FrameWork 3

Authorised Reseller
